

# Where in your body...

## Instructions

- 1 Print out the cards on the following pages. Make sure you print them out single-sided and preferably in colour.
- 2 Cut each sheet into four along the dotted lines.
- 3 Match each **question** card with its correct answer card (the matching pairs are in the same colour). Glue the **answer** and question pairs back-to-back. You can also laminate the cards for durability or glue the cards onto a scrap bit of cardboard (e.g. a cereal box).
- 4 You are now ready to play **Where in your body...!**

## Suggestions for play:

This game is suitable for 2-4 players.

- 1 Arrange all the cards so that the question sides are facing up.
- 2 Decide who will go first e.g. the youngest player.
- 3 When it is your turn, choose a question card and pick it up, being careful not to see the answer on the other side. Read the question out loud.
- 4 Try to guess the answer to the question. The other players should be able to see the answer side to be able to tell you if you got it right or wrong. If you get it right, you get to keep the card. If you get the question wrong, place the card back down, question side up.
- 5 Take turns until there are no more cards left to play. The player with the most cards at the end of the game wins!

Where  
in your  
body...

is blood made?

**Answer:** in your bones

Most of your blood  
is made in your  
bone marrow.

Where  
in your  
body...

is your  
largest muscle?

**Answer:** in your bottom

The largest muscle  
in your body is located  
in your buttocks.

The muscle helps  
move your hips.

Where  
in your  
body...

**is your DNA?**

**Answer: everywhere!**

Your DNA is in your cells, with  
most of it in the cell nucleus.

Your DNA makes you *you!*

Where  
in your  
body...
